

QIMOVA

Are You Sitting Comfortably?

Presented By Damian Bridgeman

Comfort without Compromise

Our Company philosophy is “Comfort without Compromise”. Each wheelchair user has their own unique and individual needs, and this is why we design and develop wheelchairs that never compromise with comfort and flexibility to suit every users current and future needs

Build and design your own comfort chair

- Outstanding seating and posture support to suit individual needs and requirements

- The Qimova Comfort Wheelchairs combines outstanding seating and posture support with the flexibility to suit individual needs, in a single attractive design. This gives the user a matchless degree of comfort and relief, whilst sitting correctly.
- All Qimova Comfort Wheelchairs are based on a modular concept. The core part of all our chairs is extremely configurable and it is easy to change and adjust even a highly specialised chair, to make it suitable for any user. From elegant manual chairs to fully powered indoor/outdoor driven wheelchairs.

All our chairs include features to ease common problems for wheelchair users such as pressure sores and oedema in legs and feet, in addition to simply providing excellent seating comfort and corrective posture support for the user

Adjustment

A wheelchair is not just 4 wheels, but an extension of a person and a means to enhance every user's lifestyle. We are all evolving which is why our range of wheelchairs are designed to evolve with our users, through the wide ranging adjustments and functionality of each chair.

Product range

- Two key features define our product range: Size and Operation. Many variations exist within our size categories, but as an initial guide the 4 major sizes are Adult, Bariatric, Junior and a new Paediatric size for very young children. All sizes are available as manually operated or power driven chairs.

In terms of wheelchair operation, variations can be more complex but include different ways of driving the chairs, differences in the set up of the drive wheels, and different ways to make seating adjustments.

This Is An Example Of
Our Chairs

Thank You For Listening
