Staff with appetite for commercialisation

Strong research base

Big on collaboration

BUT !

It's not just about the technical, Bio / Life Sciences skills !

We place students into businesses who contribute to areas such as:-

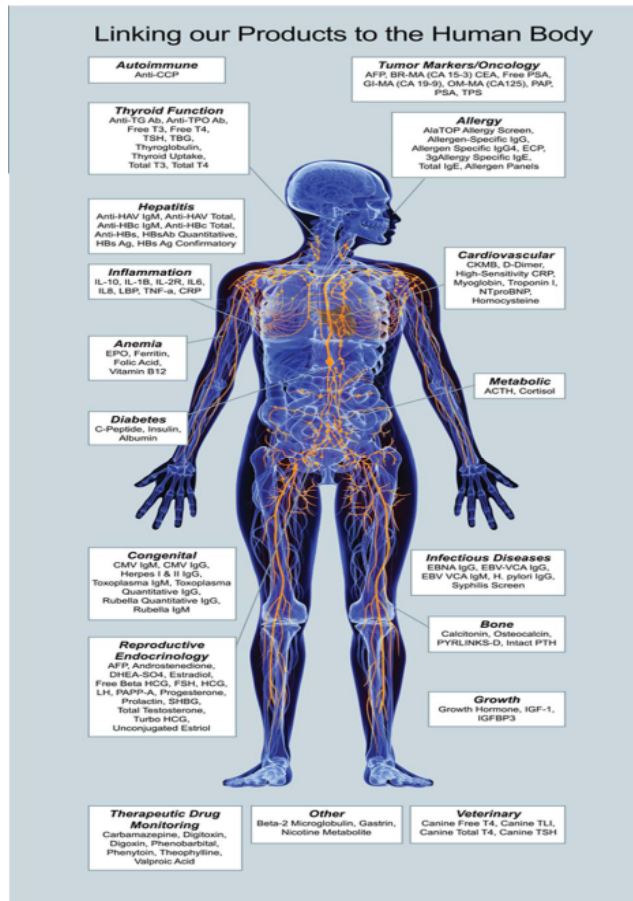

- Business
- Finance
- Law
- Marketing, PR and Communications
- Engineering
- Environmental and Sustainability issues
- Computer Science and IT

Irrespective of the business sector !

Siemens Healthcare Diagnostic Products Ltd

- Memorandum of Understanding and a structured, managed relationship

SIEMENS
Siemens Healthcare

- Work & study placements to enhance graduate employability.
- New approaches to CPD for staff of both organisations.
- Research collaborations in areas of mutual interest.
- Education outreach activities e.g. promoting STEM subjects amongst young people.
- Collaborating to attract and develop a pool of talented people to drive the knowledge economy in North West Wales.

Accessing Expertise and Knowledge

Does your business need knowledge, expertise and support with research, development and innovation in order to better meet business objectives improve competitiveness and profitable?

Bangor University has a range of established projects and initiatives, many pre-funded by various external bodies and organisations, which may be able to help. Below is a list of some of these projects and initiatives. However please feel free to contact us to discuss your individual requirements further.

BEACON is designed to build integrated 'Green Supply Chains' with a focus on developing new routes to functional, cost competitive products using biomass rather than oil. They aim to do this by understanding and engaging with businesses to cultivate and then deliver 'Green Technology Solutions' to benefit industry across a range of sectors.

Their aim is to enhance the embryonic green economy by applying excellent science to stimulate new job creation, inward investment and the promotion of Welsh scientific excellence at a global level.

The [BioComposites Centre](#) undertakes collaborative research projects to develop sustainable biobased technologies that will minimise the impact of materials on the environment, working with Large Multinationals, SMEs, Micro Companies and Research Institutes.
