The Intern Experience

“During my first week, I was handed the task of **updating the Allograft Competition Report** which seemed quite daunting at the time. **This project was incredibly beneficial** and allowed me to gain a level of **commercial awareness** I did not have prior to my internship...As soon as I started I was made to feel **part of the company**. The most important thing for me was feeling like **I was adding value** and that the **company was benefitting** from the work I was doing.”

William Llewellyn, 8 week intern
